

1.Function

The EBST5 distribution boxes are available with a fixed load or split load pan assembly. They have a fully flush fitted metal door with a "slam" type catch.

All boxes are delivered with both Neutral and Earth bars fitted and the neutral is designed to wrap around the incoming device to ensure that extra wiring space is available for the outgoing devices.

The incoming device must be selected and fitted by the installer. The top and bottom gland plates include knock - outs to suit standard size conduits. The pan assembly is fully shrouded and the busbars are one piece in design, this ensures that no "hot spots" can occur as there are no mechanical joints. The boards confirm to IEC/EN61439-1&3.

Door opening direction can be customized: left and right or up and down.

2.Specifications

For Flush Mounting

Model	No.of ways	Dimensions (mm)		
		W	H	D
EBST5-4	4ways	410	480	120
EBST5-6	6ways	410	534	120
EBST5-8	8ways	410	588	120
EBST5-12	12ways	410	696	120

If you need a complete set of product customization, please provide a schematic diagram for selection and design.
